

Muskellunge Lake, Vilas County, Wisconsin Thickness of Soft Lake Sediments*

Legend of Sediment Thickness

Yellow	0 - 5 feet
Light Orange	5 - 10 feet
Orange	10 - 15 feet
Dark Orange	15 - 20 feet
Red	20 - 25 feet
Dark Red	25 - 30 feet
Black	30 - 35 feet

* Soft sediment accumulation in Muskellunge Lake was determined by pushing a steel rod into the lake sediments until resistance stopped the rod, indicating firm lake sediments, and possibly indicating the original lake bottom from 9,000 years ago, after the glaciers had receded.

Sediment samples collected by Muskellunge Lake Association volunteers in 2005. Map produced by Blue Water Science, St. Paul, Minnesota.
